Parser Generator

- Lex is a tool that generates lexical Analyzer.

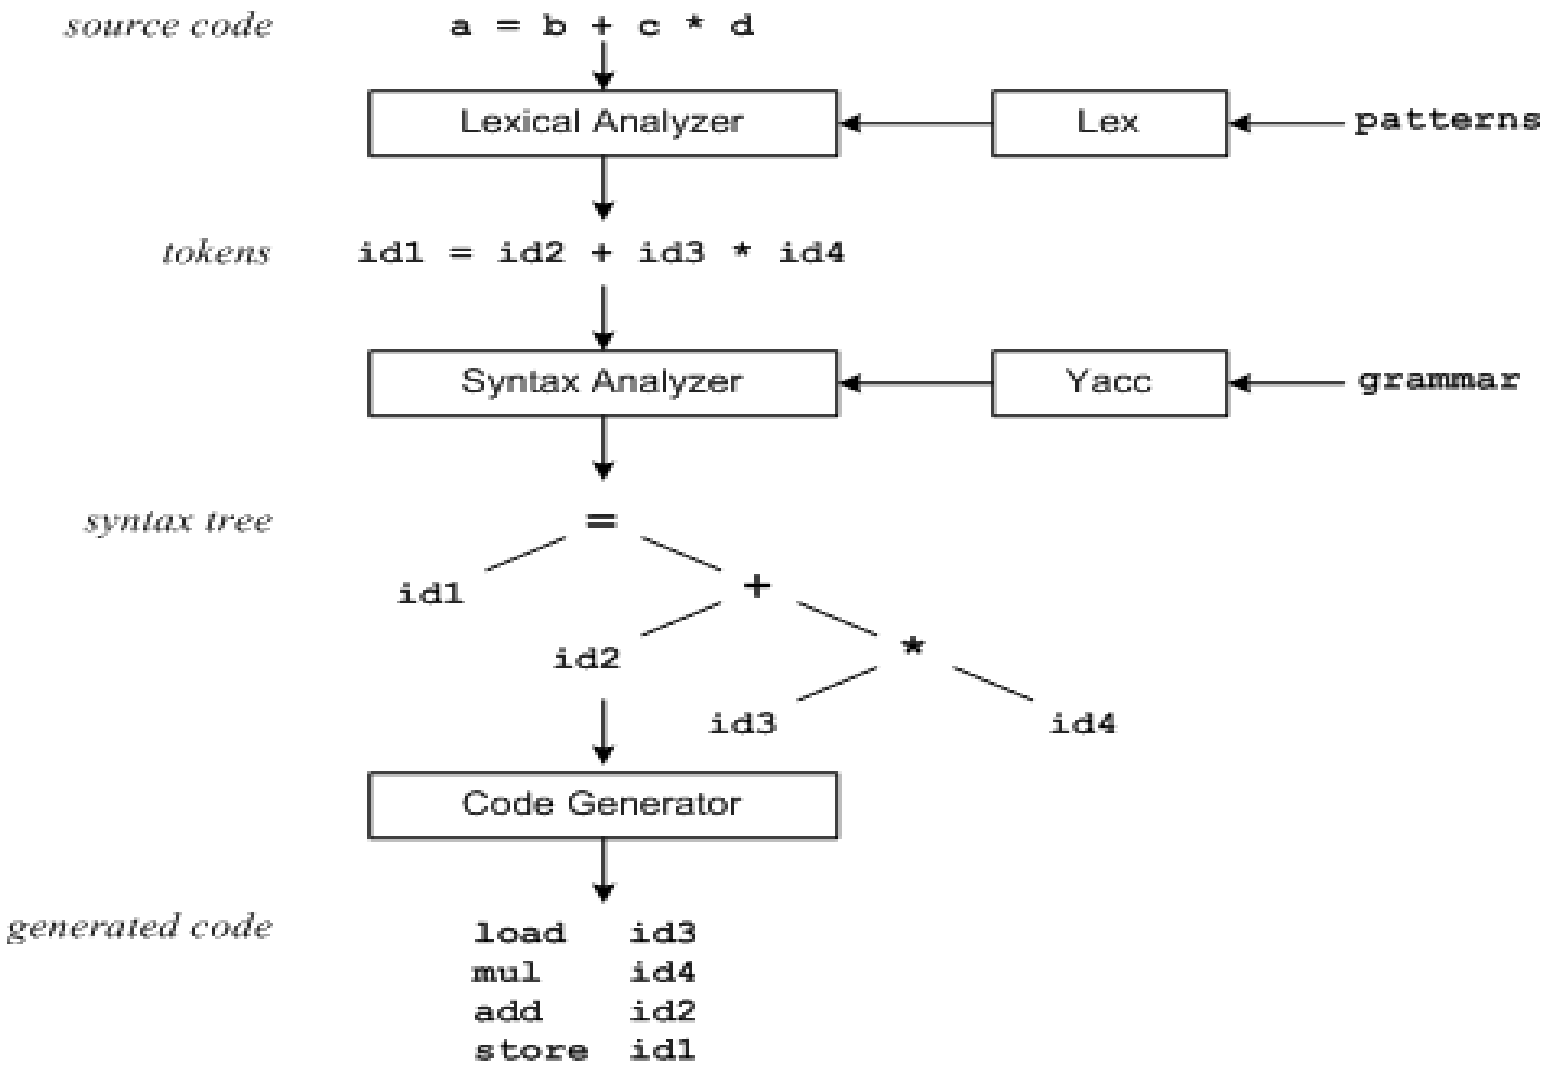
  •Lexical Analyzer takes input as source code and generate output as tokens

- Yacc: **y**et **a**nother **c**ompiler **c**ompiler

  • It does parsing and semantic processing over the tokens generated through lex.

  • Bison: parser generator, upward compatibility with yacc

lex / yacc



source code
a = b + c * d
Lexical Analyzer
Lex

Structure of yacc Program

- The yacc program has following structure:

FIRST PART

%%

Production Rules ACTIONS

%%

THIRD PART

Yacc - First Part

- The definition section defines macros and imports header files written in C within %{ %}.

- yacc definitions
  - %start
  - %token
  - %type
  - %left and many more.

Yacc - Productions

- It represents a grammar known as set of productions.

•The left hand side of a production is followed by colon (:), and right hand side.

•Multiple right-hand sides may follow separated by a ‘|’.

•Actions associated with a rule are entered in braces.

Yacc – Example Productions

```
statements: statement1 {printf("statement1");}
          | statement1 statements
{printf("statements \n");}

statement1: identifier '+' identifier
{printf("plus\n");}
      | : identifier '-' identifier
{printf("minus\n");}
```

Yacc Productions

- **$1, $2,....$n** can refer to the values associated with symbols.
- **$$** refer to the value of the left.
- Every symbol have a value associated with it (including token and non-terminals)
- Default action : $$ = $1

Yacc Example productions

```
statement1: identifier '+' identifier
                {$$ = $1 + $3;}
          | identifier '-' identifier   {$$ = $1 - $3;}
```

Yacc - Third Part

- contains valid C code that supports the language processing
- Symbol table implementation
- functions that might be called by actions associated with the productions in the second part

SAMPLE PROGRAM

Calc.y

```
%{
  /* Definition section */
 #include<stdio.h>
 int flag=0;
%}

 %token NUMBER
%left '+' '-'
%left '*' '/' '%'
%left '(' ')'

/* Rule Section */
%%
ArithmeticExpression: E{
        printf("\nResult=%d\n", $$);
        return 0;
         }
 E:      E'+'E {$$=$1+$3;}  |  E'-'E {$$=$1-$3;}   |  E'*'E {$$=$1*$3;}  |  E'/'E {$$=$1/$3;}    |
             E'%'E {$$=$1%$3;}  |  '('E')' {$$=$2;} | NUMBER {$$=$1;}

%%
```

DEFINITION

PRODUCTION RULES

Contd...

```
void main()
{
  printf("\nEnter Any Arithmetic Expression which can
 have operations Addition, Subtraction, Multiplication,
Division, Modulus and Round brackets:\n");

   yyparse();
   if(flag==0)
   printf("\nEntered arithmetic expression is Valid\n\n");
}

void yyerror()
{
   printf("\nEntered arithmetic expression is Invalid\n\n");
   flag=1;
}
```

FUNCTIONS

Calc.l

```
%{
   /* Definition section */
  #include<stdio.h>
  #include "y.tab.h"
  extern int yylval;
%}
  /* Rule Section */
%%
[0-9]+ {
         yylval=atoi(yytext);
         return NUMBER;
       }
[\t]     ;
[\n]    return 0;
.         return yytext[0];

%%
int yywrap()
{
 return 1;
}
```

```
C:\Users\abhay\Downloads\yacc\calc> bison -d calc.y

C:\Users\abhay\Downloads\yacc\calc>flex calc.l

C:\Users\abhay\Downloads\yacc\calc>gcc lex.yy.c y.tab.c -o calc.exe -w

C:\Users\abhay\Downloads\yacc\calc>calc.exe

Enter Any Arithmetic Expression which can have operations Addition, Subtraction, Multiplication, Division, Modulus and R
ound brackets:
23*4+6-(6/3)%2

Result=98

Entered arithmetic expression is Valid
```

Calc.y

```
%{
  /* Definition section */
 #include<stdio.h>
 int flag=0;
%}

 %token NUMBER

%left '(' ')‘
%left '*' '/' '%'
%left '+' '-‘

/* Rule Section */
%%
ArithmeticExpression: E{
        printf("\nResult=%d\n", $$);
        return 0;
         }
 E:      E'+'E {$$=$1+$3;}  |  E'-'E {$$=$1-$3;}   |  E'*'E {$$=$1*$3;}  |  E'/'E {$$=$1/$3;}    |
             E'%'E {$$=$1%$3;}  |  '('E')' {$$=$2;} | NUMBER {$$=$1;}

%%
```

DEFINITION

Sequence of Precedence for operator’s changed

PRODUCTION RULES

Command Prompt
C:\Users\abhay\Downloads\yacc\calc\calc1>calc.exe
Enter Any Arithmetic Expression which can have operations Addition, Subtraction, Multiplication, Division, Modulus and R
ound brackets:
5*4+3
Result=35
Entered arithmetic expression is Valid
C:\Users\abhay\Downloads\yacc\calc\calc1>
